

AGING INTERNET INFORMATION NOTES empowering users to explore internet resources

Demographic Trends and Projections

(See also: [Disabilities and Aging](#), [International Aging Statistics](#), [Life Expectancy](#), and [Baby Boomers](#))

On-line descriptive information about older adults has become increasingly abundant with the growth of the Internet. Among recent developments has been use of new web software giving researchers and public policy analysts direct access to data files in government agencies and university based demography centers. A new government portal to aging data maintained in nine different federal statistical agencies has been established through the efforts of an interagency committee. This Internet note establishes links to data tables and reports providing trend and projection data on age cohorts in the United States.
